

The Dental AI Operations Layer

A practical leave behind packet for dental owners, office managers, providers, and billing teams who want fewer dropped tasks, faster follow through, and clearer practice visibility.

Notes

AI drafted clinical notes with provider review before approval.

Front desk

Recall, scheduling, forms, follow up, and patient task support.

Billing

Claim review, pre auth support, AR visibility, and balance follow up.

Simple idea: Summit helps the practice see what needs attention, drafts the repetitive work, and keeps follow up from falling through the cracks. The office stays in control.

Why offices pay attention

Most dental offices do not have one single problem. They have dozens of small workflow leaks that cost time, revenue, and staff energy every week.

The daily reality

Clinical notes get finished late. Claims wait on missing details. Recall lists grow. Balances sit too long. Staff members ask the same questions. Owners cannot see everything without digging through separate systems.

The Summit answer

Summit sits above the daily workflows and helps organize what needs attention. It drafts, flags, prioritizes, and guides the team so work moves forward with human review at every important decision point.

What this can improve

TIME	Less manual drafting, hunting, checking, and retyping.
REVENUE	Cleaner claims, stronger follow up, fewer missed treatment and recall opportunities.
VISIBILITY	Owners and managers see the work that is stuck before it turns into a bigger issue.
STAFF CONSISTENCY	New and busy team members get workflow guidance without stopping everyone else.
PATIENT FOLLOW THROUGH	Patients get more consistent reminders, explanations, and next step outreach.

Where Summit fits in the office

Summit is not meant to replace the team. It helps the team move through notes, patient communication, billing, recall, and management visibility with less friction.

Clinical notes

SOAP style drafts from provider voice or text. Provider reviews, edits, and approves before the note becomes part of the chart.

Morning huddle

Today schedule, patient flags, insurance issues, unscheduled treatment, balances, and no show risk in one practical view.

Claim review

Flags missing attachments, narrative gaps, payer patterns, and claims that deserve a closer look before submission.

Recall and reactivation

Prioritized patient lists with context, outreach status, last visit, treatment opportunity, and recommended next step.

Front desk assistant

Fast answers for scheduling, forms, routine patient questions, task lists, and internal workflow guidance.

Owner visibility

A clean view of stuck work, delayed notes, open claims, overdue recall, aging balances, and team bottlenecks.

Pick the first workflow that hurts most

The best rollout starts narrow. One workflow, one owner, one clear success measure. Once the first workflow works, expansion is easier and less risky.

Notes Package

Best for providers charting after hours or teams with inconsistent documentation. Includes note drafting, structured templates, approval status, and missing detail prompts.

Front Desk Package

Best for offices overloaded by calls, scheduling, forms, recall, reminders, cancellations, and internal staff questions.

Billing Package

Best for claim rework, pre auths, attachments, narratives, AR, balances, payment plans, and fee questions.

Complete Practice Package

Best for growing practices that want notes, front desk, billing, recall, treatment follow up, reporting, and AI assistant support together.

Fast fit guide for a dropoff conversation

☐ If providers chart late

☐ If phones and follow up overwhelm the team

☐ If claims and AR are painful

☐ If the owner wants visibility across the practice

☐ If new staff keep asking workflow questions

What the demo should make obvious

The demo should feel like a normal day in a dental office, not a generic software tour. The goal is to show where Summit removes friction and where human approval stays in place.

1. Dashboard Pending claims, overdue recall, balances, notes awaiting approval, and tasks that need attention.	2. Morning huddle Today schedule, patient flags, insurance issues, treatment opportunities, and no show risk.
3. AI notes Voice or text input, SOAP style draft, provider edits, and approval status.	4. Claim review Risk score, missing attachments, narrative gaps, and payer specific patterns.
5. Recall plus treatment Overdue patients, unaccepted care, outreach status, and priority context.	6. Billing view Aging balances, statements, payment plans, AR status, and next step tracking.

Four questions that sell the demo

✓

Which workflow creates the most pressure right now?

✓

Which screen would your team actually use first?

✓

Where should provider or manager review happen?

✓

What would count as a clear first win in 30 days?

The business case in plain English

Dental AI should not be sold as a shiny tool. It should be judged by whether it saves time, protects revenue, improves follow through, and makes the office easier to manage.

Time returned
Fewer late notes, fewer manual lists, fewer repeated staff interruptions, and less hunting for what needs to happen next.

Revenue protected
Cleaner claim prep, better recall, stronger treatment follow up, and more consistent balance outreach.

Stress reduced
The team gets guidance, owners get visibility, and managers spend less time chasing scattered work.

Growth made easier
As a practice adds staff, patients, or locations, Summit creates repeatable workflows instead of relying only on memory.

Simple 30 day success measures

NOTES	Less after hours charting and fewer unfinished notes.
FRONT DESK	More completed outreach and fewer forgotten patient tasks.
BILLING	Fewer claim returns and faster movement on open balances.
OWNER VISIBILITY	Clearer view of stuck work without asking every team member.

Built for responsible dental AI

Summit is designed around human reviewed workflows. The software supports the team, while the practice

Responsibility stays with the practice

- ✓ Providers make final clinical decisions.
- ✓ Providers review and approve notes before they are finalized.
- ✓ Billing teams review claims before submission.
- ✓ The practice system of record remains the source of truth when used by the office.
- ✓ Security, BAA process, access controls, audit logging, retention, and consent workflows are reviewed during implementation.

Low friction rollout plan

1

Choose the first workflow

2

Map the approval points

3

Configure templates and practice rules

4

Train the owner, manager, and workflow owner

5

Track the first 30 day success measure

Schedule the right demo

Bring one question to the demo: What work is falling through the cracks in your office today?

Focused demo agenda

- Confirm the biggest workflow pain.
- Show the relevant package workflow.
- Review where human approval happens.
- Discuss integration, BAA, security, and practice policies.
- Pick the first rollout workflow and success measure.

Choose the demo path that matches your office

NOTES WORKFLOW	documentation and provider review
FRONT DESK WORKFLOW	calls, forms, recall, scheduling, and follow up
BILLING WORKFLOW	claims, pre auths, balances, and AR
COMPLETE WORKFLOW	full practice visibility and task flow
