

SUMMIT AI SERVICES

Dental AI Operations Layer

A leave-behind for dental offices evaluating AI support for notes, front desk work, billing, recall, treatment follow-up, and practice visibility.

Core idea

Summit helps dental teams see what needs attention, draft the repetitive work, and keep follow-up from falling through the cracks.

Notes

Structured drafts with provider review

Front Desk

Huddles, scheduling, forms, recall

Billing

Claim review, pre-auths, AR, payment plans

Complete

One operating layer for the practice

The practice stays in control. Summit supports the work.

What the demo looks like

The demo uses realistic dental office data so your team can see how Summit feels during a real day: schedule prep, notes, claims, recall, treatment follow-up, balances, and staff questions.

Dashboard

- Pending claims
- Outstanding balances
- Overdue recall
- Notes awaiting approval

Morning Huddle

- Today schedule
- Patient flags
- Insurance issues
- No-show risk

AI Notes

- Voice or text input
- SOAP-style draft
- Provider review
- Approval status

Claim Review

- Risk score
- Missing attachments
- Narrative gaps
- Payer patterns

Recall + Treatment

- Overdue patients
- Unaccepted care
- Outreach status
- Priority context

Billing

- Aging balances
- Statements
- Payment plans
- Reports

Demo takeaway

Summit is not one more dashboard. It is a daily workflow layer for the work that affects time, revenue, and follow-through.

What to look for during the demo

- Which workflow creates the most pressure today?
- Which screen would your team actually use first?
- Where does human review happen?
- What would count as a clear first win?

Start with the workflow that hurts most

Summit can support the whole office, but the best rollout starts narrow: one painful workflow, one owner, one success measure.

Notes Package
For providers who need faster documentation. AI-drafted SOAP notes with provider review and approval.

Front Desk Package
For teams overloaded by calls, scheduling, forms, recall, reminders, cancellations, and staff questions.

Billing Package
For offices dealing with claim rework, pre-auths, patient balances, payment plans, AR, and fee questions.

Complete Package
For growing practices that want notes, front desk, billing, reporting, recall, and treatment follow-up together.

Fast fit guide

Providers chart after hours	Notes Package
Front desk is overwhelmed	Front Desk Package
Claims or AR are painful	Billing Package
Owner wants full visibility	Complete Package
New staff need workflow help	AI Assistant add-on

Best first step
Pick the one workflow your office most wants to make easier. If Summit can make that workflow clearer, faster, and easier to manage, expansion becomes practical.

Built for responsible dental AI

Summit is designed for human-reviewed dental workflows. The software supports the team; the practice remains responsible for final clinical, billing, and compliance decisions.

Legal and compliance position

Summit is built for legal and compliant dental workflow implementation when configured with the proper practice policies, security controls, BAA process, consent workflows, access controls, audit logging, and human review.

Responsible workflow principles

- Providers make final clinical decisions.
- Providers review and approve notes.
- Billing teams review claims before submission.
- Open Dental remains the system of record when used by the practice.
- Security, BAA, access, audit, retention, and consent needs are reviewed during implementation.

Focused demo agenda

1. Confirm the biggest workflow pain
2. Show the relevant package workflow
3. Review human approval points
4. Discuss integration and compliance needs
5. Choose a first rollout workflow

Schedule the right demo

Notes workflow | Front desk workflow | Billing workflow | Complete practice workflow | AI Assistant add-on preview
Bring one question: What work is falling through the cracks in your office today?
