If you only read one page, read this one.

What Summit Is

Summit AI Services is an AI-powered operations layer for dental offices.

That means it helps the dental team organize, draft, review, and follow up on the work that surrounds patient care:

- Clinical notes.
- Morning huddles.
- Front desk tasks.
- Scheduling.
- Recall.
- Patient forms.
- Patient communication.
- Treatment follow-up.
- Insurance.
- Claim review.
- Pre-authorizations.
- Billing.
- Payment plans.
- Reports.
- Inventory.
- Compliance tasks.
- Staff workflow questions.

The Simple Pitch

Use this when someone asks, "What do you do?"

Summit helps dental offices reduce admin overload by turning notes, front desk work, billing, recall, treatment follow-up, and daily practice tasks into organized AI-assisted workflows.

Shorter:

Summit helps dental teams finish the work that falls through the cracks.

Even shorter:

Summit is an AI operations layer for dental practices.

What Summit Does Not Do

This matters. Do not oversell.

- Summit does not replace the dentist.
- Summit does not replace the office manager.
- Summit does not replace Open Dental.
- Summit does not guarantee HIPAA compliance.
- Summit does not guarantee insurance reimbursement.
- Summit does not make final clinical decisions.
- Summit does not magically fix a broken office without workflow adoption.

The safest sentence:

Summit assists the team. The practice still reviews, approves, and owns the final decision.

The Main Buyer Pain

Dental offices are busy small healthcare businesses. Most of the pain comes from too many small workflows happening at once:

- The doctor has notes to finish.
- The front desk has phones, forms, reminders, cancellations, recall, and balances.
- The billing person has claims, pre-auths, attachments, denials, and patient AR.
- The office manager has to keep the day moving without clean visibility.
- The owner wants more production, better collections, less stress, and fewer missed opportunities.

Summit is sold against that mess.

The Best Opening Question

Ask this early:

Where is your team most overloaded right now: notes, front desk work, billing, recall, treatment follow-up, or general practice visibility?

That question routes the entire sales call.

Package Shortcut

Use this to choose what to sell:

If they say...	Sell...
"Doctors are behind on notes"	Notes Package
"Front desk is overwhelmed"	Front Desk Package
"Insurance and collections are painful"	Billing Package
"We need one system across the whole practice"	Complete Package
"New staff ask the same questions all day"	AI Assistant add-on

If They Say This, Do This

Use this when you need to route a call fast.

Prospect says	What it probably means	Your next move
"We are buried at the front desk"	Too many interruptions and no clear prioritization	Ask about forms, calls, cancellations, recall, and huddle process
"Doctors chart after hours"	Provider documentation burden	Ask about note completion, appointment types, and review process
"Insurance is killing us"	Claim rework, denials, pre-auths, AR	Ask about denial reasons, attachments, narratives, and aging
"We need more production"	Schedule gaps, recall, unscheduled treatment	Ask about recall, treatment follow-up, no-shows, and waitlist
"We need better systems"	Broad operations pain	Ask which workflow breaks most often
"We are growing"	Standardization and visibility pain	Ask about locations, provider count, reporting, and training
"We already have software"	Fear of another tool	Ask which workflow their current software still does not solve
"I do not trust AI"	Risk concern	Emphasize assistive AI, human review, and final provider approval

The Golden Rule

Do not demo everything.

The product has many modules. Showing every module makes the product feel complicated. A good rep finds the pain first, then demos only the workflow that matches the pain.

The 5 Sentences Every Rep Must Memorize

- Summit is an AI operations layer for dental practices.
 - It helps organize notes, front desk work, billing, recall, treatment follow-up, and daily practice visibility.
 - Summit assists the team; the practice still reviews, approves, and owns final decisions.
 - Open Dental remains the system of record; Summit supports the workflows around it.
 - The right rollout starts with one painful workflow, not every module at once.
-

1. What You Are Really Selling

You are not selling "AI."

Dental buyers do not wake up thinking, "I need artificial intelligence." They wake up thinking:

- "My front desk is drowning."
- "My doctor is still charting after 6 PM."
- "We have overdue recall patients."
- "Claims keep coming back."
- "Treatment plans are not getting scheduled."
- "I do not know what the team is missing."
- "We need more capacity, but hiring is expensive."

Summit should be sold as practical operating leverage.

The Core Promise

Summit helps dental teams see the work, prioritize the work, draft the repetitive parts, and keep follow-up moving.

That is the cleanest value.

The Product In One Mental Model

Think of a dental office like an airport.

The dentist is flying the plane. The front desk is the gate, ticket counter, and customer support desk. Billing is baggage claim and finance. The office manager is air traffic control.

Most practices do not need more random screens. They need air traffic control.

Summit is that layer:

- What is happening today?
- Which patients need attention?
- Which claims are risky?
- Which balances need follow-up?
- Which treatment plans are unscheduled?
- Which patients might not come back?
- Which notes need review?

- Which forms are missing?
- Which team member needs help?

Do not use the airport analogy on every sales call. Use it for yourself so the product is easier to understand.

The Better Way To Talk About AI

Bad:

Our AI automates your dental office.

Good:

Summit uses AI to support the parts of the day that are repetitive, easy to miss, or hard to prioritize.

Bad:

The AI handles the clinical note.

Good:

The AI drafts the structure. The provider reviews, edits, and approves.

Bad:

The AI fixes claims.

Good:

The AI helps flag common claim risks before the billing team submits or follows up.

Bad:

The AI replaces staff.

Good:

Summit helps the staff you already have work from clearer lists and better drafts.

2. Demo Vs. Live Product Reality

Sales reps need to know what is demo-ready and what requires live implementation.

What The Current App Demonstrates Well

The current app is a polished local MVP and demo environment. It shows the intended product experience clearly.

Demo-ready workflows include:

- Dashboard.
- Morning Huddle.
- Patients.
- AI Notes.
- Claim Review.
- Patient Retention.
- Treatment Follow-Up.
- Clinical Decision Support.
- Treatment Plans.
- Insurance.
- Pre-Auth.
- Billing.
- Payment Plans.
- Fee Optimizer.
- Recall.
- Perio Chart.
- Smart Scheduling.
- Patient Interaction.
- Follow-Ups.
- Referrals.
- Patient Forms.
- Inventory.
- Procurement.
- Reports.
- Patient Scores.
- Compliance Autopilot.
- AI Assistant add-on preview.
- Settings and Open Dental configuration concepts.

What A Live Customer Rollout Needs

Do not imply every demo button is already live against the customer's real systems.

A real customer rollout may require:

- Open Dental API credentials.
- Open Dental sync design.
- Production authentication.
- User permissions.
- BAA and security review.
- HIPAA policies.
- Recording consent policy if audio is used.
- Audit logging requirements.
- Data retention policy.
- SMS vendor setup.
- Email vendor setup.
- AI model setup.
- Insurance eligibility integrations.
- Clearinghouse or claims workflow decisions.
- Customer-specific onboarding.
- Staff training.

Safe Demo Language

Use this:

The demo shows the workflow and operating model. Live rollout depends on the package, integrations, security review, and how your office wants the workflow configured.

Avoid this:

Everything you see here will automatically be connected to your live Open Dental, payers, email, and texting on day one.

Demo Login And Demo Tiers

The app has a demo login and internal demo tiers. These are for showing different levels of access. They are not the same as the buyer-facing package names.

Demo login:

- Email: demo@smartdentalai.com

- Password: demo

Internal demo tiers:

- Bronze Tier: core operations, front desk automation, scheduling, communication, forms, inventory, and compliance.
- Silver Tier: everything in Bronze plus revenue operations such as billing, recall, treatment follow-up, reports, referrals, procurement, patient retention, and patient scores.
- Gold Tier: broadest demo access, including insurance tools, clinical AI notes, decision support, perio charting, fee optimization, and full settings.

Buyer-facing packages:

- Notes Package.
- Front Desk Package.
- Billing Package.
- Complete Package.

AI Assistant is a separate paid add-on. Do not describe it as included in Bronze, Silver, Gold, Front Desk, or Complete.

Important:

Use buyer-facing package names in sales conversations. Use Bronze, Silver, and Gold only when explaining demo access.

3. Dental Office Basics For New Reps

This section teaches enough dental context to avoid sounding lost.

The Main People In A Dental Office

Owner dentist:

Owns the business and often treats patients. Cares about profit, production, clinical quality, patient experience, staff performance, and time.

Associate dentist:

Treats patients but may not own the practice. Cares about workflow, clinical quality, notes, schedule, and handoffs.

Hygienist:

Performs cleanings, perio maintenance, charting, patient education, X-rays in many offices, and recall-related care. Hygienists are very important to repeat patient revenue.

Dental assistant:

Supports the dentist during procedures, room setup, sterilization, imaging, supplies, charting support, and patient handoffs.

Office manager:

Runs the business side. Cares about schedule, staff, collections, claims, reports, patient experience, systems, and whether work is being completed.

Front desk:

Answers phones, schedules patients, handles forms, confirmations, reminders, insurance intake, balances, patient questions, and communication.

Billing / insurance coordinator:

Handles claims, insurance verification, pre-auths, attachments, narratives, denials, payments, and patient balances.

Treatment coordinator:

Explains treatment plans, costs, insurance estimates, financing, and follow-up. Not every office has a dedicated treatment coordinator.

The Main Money Terms

Production:

The value of dentistry performed or scheduled.

Collections:

Money actually collected from patients and insurance.

AR:

Accounts receivable. Money owed to the practice.

Patient AR:

Money patients owe.

Insurance AR:

Money insurance companies owe.

Aging:

How old unpaid balances or claims are. 30, 60, and 90 days matter.

Write-off:

Money the practice cannot collect because of insurance contracts or adjustments.

Fee schedule:

The practice's list of prices for procedures.

UCR:

Usual, customary, and reasonable fee benchmarks.

The Main Clinical And Workflow Terms

Open Dental:

A popular dental practice management system. Summit is positioned as an operations layer around Open Dental-style workflows, not a replacement.

SOAP note:

Clinical documentation format: Subjective, Objective, Assessment, Plan.

CDT code:

Dental procedure code. Examples: D1110 for adult cleaning, D2750 for a crown.

Recall:

Getting patients back for hygiene, perio maintenance, or continuing care.

Perio:

Gum health. Perio disease can require special treatment and charting.

Treatment plan:

Recommended procedures, codes, phases, and costs.

Unscheduled treatment:

Treatment the doctor recommended but the patient has not scheduled.

Pre-authorization:

Insurance review before treatment. It estimates coverage but does not always guarantee payment.

Claim:

Bill sent to insurance after treatment.

Denial:

Insurance refuses or delays payment.

Narrative:

Written explanation attached to a claim.

Attachment:

Supporting document, such as an X-ray, perio chart, image, or clinical note.

No-show:

Patient misses appointment.

Chair utilization:

How effectively the practice fills treatment chairs.

How A Normal Dental Day Gets Messy

Morning:

- Team checks the schedule.
- Front desk confirms patients.
- Insurance may need verification.
- Some patients have balances.
- Some patients are high no-show risk.
- Some patients have unscheduled treatment to discuss.
- Some forms may be missing.

During the day:

- Doctors and hygienists treat patients.
- Assistants support procedures.
- Notes need to be written.
- Treatment plans need to be presented.
- Patients ask insurance and payment questions.
- Emergencies or cancellations disrupt the schedule.

After visits:

- Notes need approval.
- Claims need submission.
- Narratives and attachments may be needed.
- Follow-ups may need to be sent.
- Balances may need statements.
- Recall lists need attention.

That is why Summit exists.

Common Dental Scenarios And How Summit Fits

Scenario 1: The patient cancels a long appointment tomorrow.

What the office feels:

- Lost production.
- A sudden schedule hole.
- Manual calls to fill the opening.

Summit angle:

- Smart Scheduling, waitlist, patient scores, and patient communication can help the team identify who to contact and how to fill the gap.

What to ask:

What happens today when a high-value appointment cancels?

Scenario 2: A crown claim comes back denied.

What the office feels:

- Billing rework.
- Delayed cash.
- Patient confusion.
- Staff frustration.

Summit angle:

- Claim Review can help flag documentation, narrative, pre-auth, and payer-pattern risks before submission.

What to ask:

What are the most common claim issues your billing team has to fix after submission?

Scenario 3: The doctor recommends treatment, but the patient does not schedule.

What the office feels:

- Lost production.
- Patient care delayed.
- No consistent follow-up system.

Summit angle:

- Treatment Follow-Up and Payment Plans can help track outreach, patient hesitation, cost concerns, and scheduling status.

What to ask:

How do you follow up with patients who leave without scheduling recommended treatment?

Scenario 4: The office has a large overdue hygiene list.

What the office feels:

- Empty schedule opportunities.
- Patients drifting away.
- Hygienists underutilized.

Summit angle:

- Recall and Patient Retention can help prioritize outreach instead of treating recall like one giant spreadsheet.

What to ask:

How do you decide which overdue recall patients to contact first?

Scenario 5: A new front desk hire does not know Open Dental workflows.

What the office feels:

- Manager interruptions.
- Slower check-in and check-out.
- More mistakes.

Summit angle:

- AI Assistant can help with staff workflow questions and Open Dental guidance.

What to ask:

What questions do new staff ask your manager over and over?

4. The Pain Map

A great sales call is just pain mapping.

Do not pitch every feature. Find which pain bucket they are in.

Pain Bucket 1: Notes

What they say:

- "Doctors are behind on notes."
- "Charting takes too long."
- "Providers finish notes after hours."
- "Documentation is inconsistent."
- "Claims get delayed because notes or narratives are incomplete."

What they need:

- AI Notes.
- SOAP note drafts.
- Provider review.
- Procedure summaries.
- Perio or clinical context if relevant.

Best package:

- Notes Package.

Main value:

Providers review a structured draft instead of starting from a blank screen.

Pain Bucket 2: Front Desk

What they say:

- "The phones never stop."
- "We are constantly chasing forms."
- "Patients cancel and we scramble."
- "Recall is inconsistent."
- "No one knows what to prioritize."
- "New staff keep asking the same questions."

What they need:

- Morning Huddle.

- Smart Scheduling.
- Patient Interaction.
- Forms.
- Follow-Ups.
- Recall.
- AI Assistant if staff questions are a big issue.

Best package:

- Front Desk Package.

Main value:

The front desk gets organized worklists instead of trying to remember everything.

Pain Bucket 3: Billing

What they say:

- "Claims keep getting denied."
- "Narratives take forever."
- "Pre-auths fall through the cracks."
- "Patient balances are aging."
- "Production is good, but collections are not."
- "Insurance is a mess."

What they need:

- Claim Review.
- Insurance.
- Pre-Auth.
- Billing.
- Payment Plans.
- Fee Optimizer.
- Reports.

Best package:

- Billing Package.

Main value:

Billing gets a review layer before problems turn into denied claims or aging balances.

Pain Bucket 4: Whole-Practice Visibility

What they say:

- "We need better systems."
- "The practice feels chaotic."
- "I cannot see what is falling behind."
- "Different locations do things differently."
- "I need one place to manage the day."
- "We want to grow without adding chaos."

What they need:

- Dashboard.
- Morning Huddle.
- AI Notes.
- Claim Review.
- Billing.
- Recall.
- Treatment Follow-Up.
- Reports.
- Patient Scores.
- Patient Retention.
- Compliance.

Best package:

- Complete Package.

Main value:

Summit becomes the operating layer for the daily work that affects time, revenue, and follow-through.

Pain Ranking Exercise

If a prospect says "everything is a problem," slow them down.

Say:

I believe you. But for rollout, we still need to rank the pain. If you had to choose the one workflow that would create the fastest win, would it be notes, front desk, billing, recall, treatment follow-up, or reporting?

Then rank:

- Most painful.
- Most expensive.
- Easiest to adopt.
- Best internal champion.

The best first workflow is usually where pain is high and adoption is realistic.

5. Who You Are Selling To

Owner Dentist

What they care about:

- Revenue.
- Profit.
- Clinical quality.
- Staff efficiency.
- Time.
- Risk.
- Patient experience.
- Whether the practice can grow.

What to say:

Summit helps protect provider time and make the business side more visible. It helps your team see open work, draft repetitive documentation, follow up on patients, and catch revenue cycle issues earlier.

What not to say:

This will run your practice for you.

Best questions:

- "Where do you feel the practice is leaking the most revenue right now?"
- "What work follows you home?"
- "Where does the team depend too much on memory?"
- "What would you want to see every morning before patients arrive?"

Likely package:

- Notes if charting is the pain.
- Billing if collections or claims are the pain.
- Complete if the owner wants broad operating leverage.

Office Manager

What they care about:

- Team workload.
- Schedule flow.
- Accountability.
- Claims.
- Collections.
- Patient issues.
- Reports.
- Fewer surprises.

What to say:

Summit gives you a practical view of today's work: schedule risks, balances, insurance issues, forms, follow-ups, recall, claims, and reports.

What not to say:

This is just another dashboard.

Best questions:

- "What do you check first every morning?"
- "Which lists are currently manual?"
- "Where do tasks fall through the cracks?"
- "Who on the team is most overloaded?"

Likely package:

- Front Desk.
- Billing.
- Complete.

Front Desk Lead

What they care about:

- Phones.
- Scheduling.
- Patient questions.
- Forms.
- Confirmations.
- Cancellations.
- Recall.
- Balances.

- Not being blamed for missing things.

What to say:

Summit helps the front desk know who needs attention, why they need attention, and what to do next.

Best questions:

- "How do you know who needs forms before tomorrow?"
- "What happens when someone cancels a large appointment?"
- "How do you prioritize recall?"
- "What questions do newer staff ask most often?"

Likely package:

- Front Desk.
- AI Assistant add-on.

Billing / Insurance Coordinator

What they care about:

- Clean claims.
- Attachments.
- Narratives.
- Pre-auths.
- Denials.
- Payment posting.
- Aging AR.
- Patient balances.

What to say:

Summit helps billing teams catch common claim and documentation risks earlier, then keep pre-auths, balances, and payment follow-up organized.

Best questions:

- "What claims come back most often?"
- "Who writes narratives?"
- "How do you track missing attachments?"
- "How do you prioritize AR?"

Likely package:

- Billing.
- Complete if notes and billing need to connect.

Multi-Location Operator

What they care about:

- Standard workflows.
- Visibility across locations.
- Training.
- Consistency.
- Reports.
- Reducing dependency on one strong office manager.

What to say:

Summit helps make the same categories of work visible across offices: schedule risks, patient follow-up, claims, balances, notes, and reports.

Best questions:

- "Which workflows vary most by location?"
- "How do you know one office is falling behind before month end?"
- "How are new staff trained?"
- "Which reports do you trust?"

Likely package:

- Complete.
 - AI Assistant add-on.
-

6. Package Playbooks

Notes Package

Plain-English Description

The Notes Package helps providers create cleaner clinical notes faster.

It turns voice or text into a structured draft. The provider reviews, edits, and approves the note.

When To Sell It

Sell Notes when the buyer mentions:

- Late charting.
- Documentation backlog.
- Inconsistent notes.
- Provider burnout.
- Need for better SOAP notes.
- Documentation affecting claims.

What To Show

Show:

- AI Notes.
- A patient note waiting for review.
- The transcript or input.
- The SOAP sections.
- Edit/review/approve workflow.
- Perio or clinical support only if relevant.

Discovery Questions

- "How long do doctors spend finishing notes after the last patient?"
- "Are notes usually completed same day?"
- "Who reviews notes before they are final?"
- "Which procedures create the most documentation?"
- "Do incomplete notes ever delay claims?"

Best Talk Track

Notes are not just paperwork. They affect clinical continuity, claims, risk, and provider time. Summit helps by drafting a structured note that the provider can review and approve.

Demo Close

If notes are the first rollout, success would be simple: fewer unfinished notes, faster provider review, and a cleaner same-day documentation process.

Common Objection

"AI notes are risky."

Response:

They would be risky if AI finalized the chart alone. That is not the workflow. Summit drafts the note. The provider reviews, edits, and approves the final documentation.

Front Desk Package

Plain-English Description

The Front Desk Package helps the team manage the daily patient work that creates interruptions.

It helps with huddles, scheduling, communication, forms, follow-ups, recall, and staff workflow questions.

When To Sell It

Sell Front Desk when the buyer mentions:

- Too many calls.
- Cancellations.
- No-shows.
- Forms.
- Recall problems.
- Patient communication.
- New staff training.
- Front desk overload.

What To Show

Show:

- Morning Huddle.
- Patient list with flags.
- Smart Scheduling.
- Forms.
- Patient Interaction.
- Follow-Ups or Recall.
- AI Assistant if they mention staff questions.

Discovery Questions

- "How many places does the front desk check before the day starts?"
- "How do you handle cancellations?"
- "How do you know which patients need forms?"
- "Who owns recall?"
- "How do new staff learn workflows?"

Best Talk Track

The front desk is expected to remember too much. Summit turns that work into clearer lists: who needs forms, who needs confirmation, who has a balance, who is overdue, who needs follow-up, and what the next step should be.

Demo Close

A good first rollout would be Morning Huddle plus one patient follow-up workflow, so the team feels value immediately without trying to adopt everything.

Common Objection

"We already have reminders."

Response:

Reminders are one piece. Summit is broader: huddles, forms, scheduling, recall, balances, follow-ups, patient context, and staff workflow help. If reminders are already solved, we should focus where your team still feels overloaded.

Billing Package

Plain-English Description

The Billing Package helps the team catch revenue cycle problems earlier.

It gives the practice better visibility into claim risks, missing documentation, pre-auths, balances, payment plans, fee schedules, and reports.

When To Sell It

Sell Billing when the buyer mentions:

- Denied claims.
- Missing attachments.
- Weak narratives.
- Pre-auth tracking.
- Patient balances.
- Aging AR.
- Collections.
- Fee schedule questions.

What To Show

Show:

- Claim Review.
- Risk score and issue list.
- Suggested fixes.
- Payer patterns.
- Pre-Auth.
- Billing.
- Payment Plans.
- Reports or Fee Optimizer if owner is present.

Discovery Questions

- "What are your most common denial reasons?"
- "How do you know which claims need attachments?"
- "Who writes narratives?"
- "How are pre-auths tracked?"
- "How much AR is over 60 or 90 days?"

Best Talk Track

Summit gives billing a second review layer. It helps catch missing documentation, payer-specific patterns, pre-auth needs, and balance follow-up before they become denied claims or aging AR.

Demo Close

A strong first rollout would be claim review before submission, then pre-auth and billing queues after the team is comfortable.

Common Objection

"Can you guarantee fewer denials?"

Response:

No software should guarantee payment. What Summit can do is help the team catch preventable issues earlier and build a cleaner review process.

Complete Package

Plain-English Description

The Complete Package is for practices that want Summit across notes, front desk, billing, and practice visibility.

It is the full operating layer.

When To Sell It

Sell Complete when the buyer mentions:

- Growth.
- Multiple providers.
- Multiple locations.
- Lack of visibility.
- Too many disconnected systems.
- Need for standardization.
- Several pain buckets at once.

What To Show

Show:

- Dashboard.
- Morning Huddle.
- AI Notes.
- Claim Review.
- Billing.
- Recall or Treatment Follow-Up.
- Reports.

- AI Assistant if relevant.

Discovery Questions

- "Where does the team lose the most time?"
- "Which workflows vary by provider or location?"
- "What do you wish you could see every morning?"
- "What work is invisible until it becomes a problem?"
- "If we fixed one workflow first, which one should it be?"

Best Talk Track

Complete is for offices that do not want separate point solutions for every bottleneck. It gives the team one operating layer for the work that affects time, revenue, and follow-through.

Demo Close

Even with Complete, I would start with one anchor workflow first. Once the team is using it, we expand into the next workflow.

7. Feature Translation Table

Do not describe features mechanically. Translate them into buyer value.

Tool	What It Means In Plain English	Why A Practice Cares
Dashboard	Snapshot of practice activity, claims, balances, recall, and revenue indicators	Owners and managers see what needs attention
Morning Huddle	Daily briefing before patients arrive	Team starts the day with risks and opportunities visible
Patients	Searchable patient context	Staff find patient info faster
AI Notes	Drafts structured notes from voice or text	Providers spend less time starting from scratch
Claim Review	Checks claims for likely issues	Billing catches preventable problems earlier
Patient Retention	Flags patients likely not to return	Team can reach out before losing patients
Treatment Follow-Up	Tracks outreach for unaccepted treatment	More recommended care gets followed up
Clinical Decision Support	Surfaces clinical suggestions and alerts	Provider gets assistive prompts, not final decisions
Treatment Plans	Organizes procedures, costs, and status	Treatment is easier to present and track
Insurance	Tracks plans, coverage, and claim status	Reduces insurance confusion
Pre-Auth	Tracks insurance pre-approval workflow	Pre-auths do not get forgotten
Billing	Tracks patient balances and reminders	Patient AR stays visible
Payment Plans	Tracks installment plans	Patients can accept care with manageable payments
Fee Optimizer	Compares fee schedule opportunities	Owner can evaluate pricing and write-offs

Recall	Tracks overdue hygiene/periodontal patients	Practice fills schedule with existing patients
Perio Chart	Tracks gum measurements and history	Supports perio care and documentation
Smart Scheduling	Helps with utilization, gaps, and waitlist	Schedule produces more and wastes less
Patient Interaction	Unified patient messages	Communication is less scattered
Follow-Ups	Tracks post-visit check-ins	Patient care feels more consistent
Referrals	Tracks specialist handoffs	Referral work does not disappear
Patient Forms	Sends and reviews forms	Less clipboard work and fewer check-in delays
Inventory	Tracks supplies and reorder points	Avoids stockouts
Procurement	Forecasts supply needs and spend	Purchasing gets more disciplined
Reports	Shows production, collections, aging, and provider metrics	Managers make better decisions
Patient Scores	Scores reliability and engagement	Staff know who needs extra attention
Compliance Autopilot	Tracks compliance tasks and training	Compliance work is more organized
AI Assistant	Answers staff workflow questions	Newer staff get help without waiting for a manager

8. The Sales Call Flow

Use this structure on almost every call.

Step 1: Set The Frame

Say:

I will keep this practical. Summit can help with a lot, but I do not want to give you a generic feature tour. I want to understand where your office is feeling the most pressure, then show the workflow that fits.

Why this works:

- It lowers pressure.
- It sounds consultative.
- It gives you permission not to demo everything.

Step 2: Route The Pain

Ask:

Where is your team most overloaded right now: notes, front desk work, billing, recall, treatment follow-up, or general practice visibility?

Then listen.

If they say notes, go Notes.

If they say front desk, go Front Desk.

If they say insurance, claims, AR, collections, go Billing.

If they say everything, go Complete but still choose one starting workflow.

Step 3: Understand Current Process

Ask:

How are you handling that today?

Then:

- Who owns it?

- How often does it fall behind?
- What happens when it falls behind?
- How do you know it is done?
- What does it cost when it is missed?

Step 4: Quantify Pain

You do not need perfect numbers. You need rough business impact.

Ask:

- "How many hours a week does that take?"
- "How many people touch that process?"
- "How many patients are affected?"
- "How much money is usually tied up there?"
- "How often does it create a patient complaint?"

Step 5: Map To Package

Say:

Based on that, I would not start with every Summit module. I would start with the {{Package}} workflow because {{reason}}.

Example:

Based on that, I would start with the Billing Package because the biggest issue is not patient communication. It is claim rework, pre-auth tracking, and balances aging past 60 days.

Step 6: Focused Demo

Show only the relevant path.

Do not say:

Let me show you everything.

Say:

I am going to show this through the exact workflow we discussed.

Step 7: Confirm Fit

Ask:

Would this workflow actually change how your team handles that problem?

Then:

What would need to be true for your team to adopt it?

Step 8: Close For Next Step

Possible next steps:

- Demo with owner.
- Demo with office manager.
- Demo with billing lead.
- Security/integration review.
- Package/pricing discussion.
- Implementation scoping.

Say:

The next useful step is not another broad overview. It is a focused session with {{stakeholder}} to confirm {{workflow}}, {{integration/security question}}, and the rollout path.

9. Discovery Question Bank

Use these when you need better questions.

General

- "What made you take this call?"
- "What is the most frustrating part of running the office right now?"
- "What work is still happening in spreadsheets?"
- "What does the team forget when the day gets busy?"
- "What do you wish you could see before the day starts?"
- "What are you trying to improve this quarter?"
- "Where are you losing time?"
- "Where are you losing money?"
- "Where are patients getting a worse experience than they should?"

Notes

- "Do providers finish notes same day?"
- "Which provider is most behind?"
- "What procedure types create the longest notes?"
- "Are notes affecting claim submission?"
- "Who approves the final chart entry?"
- "Do providers dictate, type, template, or use another note system?"
- "What would make an AI note draft trustworthy enough to use?"

Front Desk

- "How many calls come in on a normal day?"
- "How do you handle cancellations?"
- "Do you have a waitlist?"
- "How do you know which patients need forms?"
- "How do you confirm appointments?"
- "Who owns recall?"
- "Do patients respond better to text, email, or phone?"
- "How do you train new front desk staff?"

Billing

- "What claims are most painful?"
- "What payer causes the most rework?"

- "How do you know a claim is ready to submit?"
- "Who adds attachments?"
- "Who writes narratives?"
- "How do you track pre-auths?"
- "What does AR over 60 days look like?"
- "How do you handle patient balances?"

Treatment Follow-Up

- "How much unscheduled treatment is sitting in the system?"
- "Who follows up after treatment is presented?"
- "How many times do you follow up?"
- "How do you know why patients hesitate?"
- "Do you offer payment plans?"
- "How do you prioritize high-value plans?"

Recall

- "How many hygiene patients are overdue?"
- "How often do you work recall?"
- "Who owns it?"
- "What messages do you send?"
- "Do you prioritize by patient value, time overdue, or provider?"
- "How do you know recall outreach worked?"

Management

- "What reports do you trust?"
 - "What do you review weekly?"
 - "What do you only discover at month end?"
 - "Which location or provider workflow varies the most?"
 - "What would make this worth the team's time?"
 - "Who would own rollout?"
-

10. Demo Playbooks

Demo Rule: Show The Story, Not The Software

Every demo should have a before and after.

Before:

Today this work is manual, scattered, or dependent on memory.

After:

With Summit, the work becomes visible, prioritized, drafted, and easier to review.

Notes Demo Script

Open:

You mentioned providers are behind on notes, so I am not going to start with billing or scheduling. I want to show the note workflow.

Show:

- Notes list.
- Statuses like draft, pending approval, approved.
- Patient context.
- Transcript or note input.
- SOAP output.
- Edit and approve workflow.

Say:

The important part is that Summit does not remove provider review. It gets the provider out of blank-page mode.

Ask:

Would your providers trust a draft if they could edit and approve every section before it becomes final?

Close:

If this were the first rollout, I would measure whether notes are getting approved faster and whether providers are spending less time charting after hours.

Front Desk Demo Script

Open:

You mentioned the front desk is overloaded, so I want to start with how the day begins.

Show:

- Morning Huddle.
- Today's patient flags.
- Balances.
- Insurance issues.
- No-show risk.
- Unscheduled treatment.
- Smart Scheduling.
- Forms or Patient Interaction.

Say:

This gives the front desk a practical action list before patients start arriving.

Ask:

Which of these flags would save your team the most time: forms, confirmations, balances, recall, or schedule gaps?

Close:

A good first rollout would be the morning huddle plus the one front desk workflow causing the most interruptions.

Billing Demo Script

Open:

You mentioned claims and pre-auths, so I want to show how Summit reviews billing work before it becomes rework.

Show:

- Claim Review.
- Claim risk score.
- Issues found.
- Missing documentation.
- Payer patterns.
- Suggested narrative or fix.
- Pre-Auth.
- Billing balances.
- Payment Plans.

Say:

This is not a guarantee that a payer will pay. It is a way to catch the common preventable issues earlier.

Ask:

Are these the kinds of issues your billing team has to catch manually today?

Close:

If billing is the first rollout, I would start with claim review before submission, then expand into pre-auths and patient balances.

Complete Demo Script

Open:

Because your pain is broader than one department, I will show the complete operating view. I will still keep it focused.

Show:

- Dashboard.
- Morning Huddle.
- AI Notes.
- Claim Review.
- Recall or Treatment Follow-Up.
- Billing.
- Reports.

Say:

The value of Complete is not that every screen exists. The value is that the office can see and act on the work that affects production, collections, patient follow-up, and team time.

Ask:

If you had to roll this out in one workflow first, which one would create the fastest internal win?

Close:

I would scope Complete around a phased rollout: one anchor workflow first, then the next workflow once adoption is real.

11. Objection Handling

"We already use Open Dental."

Response:

That makes sense. Summit is not meant to replace Open Dental. Open Dental is the system of record. Summit helps the team act on workflows around that data: notes, huddles, recall, claim review, billing follow-up, treatment follow-up, and reporting.

Follow-up:

Which Open Dental workflow still takes the most manual effort?

"We already have reminders."

Response:

Good. Then reminders may not be the pain. Summit is broader than reminders. It can help with forms, scheduling, recall prioritization, treatment follow-up, balances, claim review, huddles, and staff workflow support.

Follow-up:

Outside of reminders, where does the front desk still get overloaded?

"We already have an AI scribe."

Response:

If notes are fully solved, we should not force the Notes Package. Summit can still help with front desk, billing, treatment follow-up, recall, and practice visibility. If notes are only partly solved, we can compare the workflow.

Follow-up:

Is documentation the only pain, or are there operational gaps around claims, follow-up, and scheduling too?

"AI in clinical care sounds risky."

Response:

I agree that autonomous clinical AI would be risky. Summit should be used as assistive AI. It drafts, flags, organizes, and suggests. The licensed provider makes the final clinical decision.

Follow-up:

Would you be comfortable evaluating it if provider review and approval are required?

"Can you guarantee fewer denials?"

Response:

No. Payers still make coverage decisions, and no responsible vendor should guarantee reimbursement. Summit helps catch common preventable issues before submission, such as missing documentation, frequency issues, payer patterns, and weak narratives.

Follow-up:

What denial types are costing the team the most time today?

"How much does it cost?"

Response:

Pricing depends on the package, provider count, locations, integration scope, and rollout needs. Before we talk numbers, I want to make sure we are matching the package to the workflow that actually matters.

Follow-up:

Is the primary buying reason notes, front desk capacity, billing, or full practice visibility?

"We do not have time to implement another system."

Response:

Then we should not roll out everything at once. The right approach is to pick one painful workflow, assign an owner, define success, and expand only after the team is using it.

Follow-up:

Which workflow would your team adopt fastest because the pain is already obvious?

"My staff will resist this."

Response:

That usually happens when software feels like extra work. Summit should be introduced through a workflow that removes pain quickly, like morning huddle, claim review, or notes awaiting approval.

Follow-up:

Who on your team would be the most likely champion?

"Is this HIPAA compliant?"

Response:

Summit should be evaluated like any healthcare software that may touch PHI. That means BAA, access control, audit logging, security review, consent policies if recording is used, and implementation review. I would not reduce that to a casual yes or no on a sales call.

Follow-up:

Who handles vendor security and BAA review on your side?

"Can it replace a front desk person?"

Response:

I would not position it that way. Summit helps the front desk work from clearer lists and better drafts. It is about capacity and consistency, not removing the human patient relationship.

Follow-up:

What front desk work is most repetitive today?

"We are too small."

Response:

That may be true if there is not enough workflow pain yet. The question is whether you already feel pressure in one area. A small practice with heavy note burden or billing pain can still be a fit. A small practice with no clear bottleneck may not be ready.

Follow-up:

Which workflow, if any, already feels heavier than it should?

12. The Right And Wrong Way To Say Things

AI Notes

Wrong:

Summit writes the clinical record for you.

Right:

Summit drafts a structured note for provider review and approval.

Claims

Wrong:

Summit makes sure claims get paid.

Right:

Summit helps catch common claim risks before submission.

Front Desk

Wrong:

Summit replaces front desk work.

Right:

Summit gives the front desk clearer priorities and better workflow support.

Compliance

Wrong:

Summit makes you HIPAA compliant.

Right:

Summit should be implemented with proper HIPAA, BAA, security, access, audit, and consent review.

Open Dental

Wrong:

Summit replaces Open Dental.

Right:

Open Dental remains the system of record. Summit supports the operational workflows around it.

AI Assistant

Wrong:

Staff never need a manager again.

Right:

The AI Assistant helps staff answer common workflow questions faster.

13. ROI Made Simple

Do not make fake ROI promises.

Use this formula:

Value = time saved + revenue recovered + risk reduced + consistency improved.

Time Saved

Possible time savings:

- Provider charting.
- Huddle prep.
- Front desk list-building.
- Message drafting.
- Claim review.
- Pre-auth tracking.
- Balance follow-up.
- Report gathering.
- Staff questions.

Questions:

- "How many hours per week does this take?"
- "Who does that work?"
- "What is their hourly cost?"
- "What higher-value work could they do instead?"

Revenue Recovered

Possible revenue recovery:

- Overdue recall scheduled.
- Unaccepted treatment followed up.
- Cancellations filled.
- Claims submitted cleaner.
- Pre-auths followed up.
- Patient balances collected.
- Payment plans offered.
- Fee schedule improved.

Questions:

- "How much unscheduled treatment is sitting in the system?"
- "How many hygiene patients are overdue?"
- "What is your average hygiene visit worth?"
- "How much AR is over 60 days?"
- "How many claim rework hours happen weekly?"

Risk Reduced

Possible risk reduction:

- Better note review.
- More consistent documentation.
- More organized compliance tasks.
- Better audit trails.
- Less dependency on one experienced staff member.
- Clearer consent and forms workflow.

Questions:

- "What happens if your billing lead is out for a week?"
- "How do you prove a task was completed?"
- "How do you train new staff?"
- "Where does inconsistency create risk?"

Simple ROI Talk Track

I would not ask you to trust a generic ROI number. We should pick the workflow first. If it is notes, we estimate provider time saved. If it is recall, we estimate patients reactivated. If it is billing, we estimate rework and AR impact. Then we decide whether the package makes sense.

14. Compliance And Safety Boundaries

This section protects the company and the rep.

Words You Can Use

Use:

- "Assistive AI."
- "Human review."
- "Provider approval."
- "Workflow support."
- "Implementation review."
- "Security review."
- "BAA process."
- "Consent policy."
- "Audit trail support."
- "Practice remains responsible for final decisions."

Words To Avoid

Avoid:

- "Autonomous diagnosis."
- "Guaranteed compliance."
- "Guaranteed payment."
- "Replaces the provider."
- "No consent needed."
- "No legal risk."
- "Fully automated clinical decisions."
- "HIPAA compliant out of the box."

Audio And Consent

If voice recording or transcription comes up:

Recording rules vary by state and office policy. The practice should have clear patient and staff consent workflows before recording clinical encounters.

Clinical Decision Support

Say:

Clinical Decision Support can surface prompts and recommendations, but the licensed provider makes the final decision.

Claims And Billing

Say:

Claim Review helps identify likely issues. It does not guarantee reimbursement and does not replace billing judgment.

Compliance Autopilot

Say:

Compliance Autopilot helps organize compliance tasks and training. It is not legal advice and does not replace a compliance program.

15. Cold Outreach

Keep outreach specific. Do not lead with vague AI hype.

Email: Owner Dentist

Subject: Reducing admin drag in the practice

Hi {{FirstName}},

I work with Summit AI Services. We help dental offices organize the work that usually piles up around patient care: notes, front desk follow-up, recall, claims, billing, treatment follow-up, and daily huddles.

The goal is not to replace clinical judgment. It is to give the team clearer worklists, better drafts, and fewer loose ends.

Worth a quick look if admin drag is a priority this year?

Best, {{YourName}}

Email: Front Desk Pain

Subject: Front desk capacity

Hi {{FirstName}},

Many dental front desks are expected to manage calls, scheduling, forms, confirmations, recall, balances, and patient follow-up at the same time.

Summit helps turn that work into clearer daily workflows so the team knows who needs attention and what should happen next.

Would it be useful to see the front desk workflow?

Best, {{YourName}}

Email: Billing Pain

Subject: Claim review and pre-auth follow-up

Hi {{FirstName}},

Does your team have a clean way to catch claim issues before submission?

Summit helps dental billing teams review common risks like missing documentation, weak narratives, payer patterns, pre-auth needs, and patient balance follow-up.

If insurance work is slowing the office down, I can show the billing workflow in 15 minutes.

Best, {{YourName}}

LinkedIn Message

Hi {{FirstName}}, I work with Summit AI Services. We help dental practices organize notes, front desk work, recall, treatment follow-up, claim review, billing, and daily huddles. If admin overload is a priority, I can send a short overview.

Voicemail

Hi {{FirstName}}, this is {{YourName}} with Summit AI Services. We help dental offices reduce admin drag around notes, front desk follow-up, claims, billing, recall, and daily huddles. I had a quick question about where your team is feeling the most pressure. You can reach me at {{Phone}}.

16. Discovery Call Script

Opening

Thanks for taking the time. I will keep this practical. Summit can help with several workflows, but I do not want to give you a generic feature tour. I want to understand where your office is feeling the most pressure first.

Pain Routing

Where is your team most overloaded right now: provider notes, front desk work, billing and insurance, recall, treatment follow-up, or general practice visibility?

Current Process

How are you handling that today?

Who owns it?

What happens when it falls behind?

How do you know it is done?

Quantify

Roughly how much time does that take each week?

How often does it create lost revenue, delayed collections, or patient frustration?

Package Recommendation

Based on that, I would start with {{Package}}. The reason is {{reason}}.

Next Step

The next useful step is a focused demo around {{workflow}} with {{stakeholder}} involved. That will tell us whether this is a real fit.

17. Demo Call Script

Opening

I am going to show Summit through the workflow we discussed. I will skip the modules that do not matter right now.

During The Demo

Use these phrases:

- "This is the work queue."
- "This is what the team sees first."
- "This is where Summit drafts the repetitive part."
- "This is where the human reviews."
- "This is what would normally fall through the cracks."
- "This is how the manager sees what is still open."

Fit Check

Ask:

Does this match how the work actually happens in your office?

Then:

What would your team need changed for this to fit?

Close

If we moved forward, I would recommend starting with {{workflow}}, assigning {{owner}}, and measuring {{success metric}} before expanding.

18. Follow-Up Templates

After Discovery

Subject: Summit recap and recommended focus

Hi {{FirstName}},

Thanks for the conversation today.

What I heard:

- Main pain: {{Pain}}
- Current process: {{Current Process}}
- Impact: {{Impact}}
- Best-fit package: {{Package}}
- Best first workflow: {{Workflow}}

For the next call, I recommend we focus only on {{Workflow}} and include {{Stakeholders}}.

Best, {{YourName}}

After Demo

Subject: Summit demo recap

Hi {{FirstName}},

Recap from today's demo:

- Workflow reviewed: {{Workflow}}
- Most relevant Summit tools: {{Tools}}
- Likely package: {{Package}}
- Open questions: {{Questions}}
- Suggested first rollout: {{Rollout}}

The next step would be {{Next Step}}.

Best, {{YourName}}

Stalled Deal

Subject: Should we narrow the scope?

Hi {{FirstName}},

Rather than evaluating all of Summit at once, it may be easier to narrow the decision to one workflow.

From our last conversation, {{Workflow}} sounded like the clearest pain. If that is still true, I can set up a focused session around only that workflow and the people who would own it.

Best, {{YourName}}

19. Qualification Scorecard

Use this to decide whether an opportunity is worth serious time.

Category	Weak	Medium	Strong
Pain	Curious but vague	Clear workflow frustration	Urgent business pain
Buyer	Researcher only	Influencer involved	Owner/manager involved
Fit	No clear package	One package could fit	Strong package fit
Urgency	No timeline	This quarter	Active priority
Champion	No owner	Possible owner	Clear internal champion
Process	Unknown	Some steps known	Decision process clear

Strong opportunity:

- Clear pain.
- Decision maker involved.
- Package fit is obvious.
- Next step is specific.
- Someone owns implementation.

Weak opportunity:

- No pain.
- No buyer.
- Wants AI magic.
- Refuses compliance/security discussion.
- Only shopping for the cheapest reminder tool.

20. Implementation Expectations

Sales should set rollout expectations early.

The Right Implementation Message

Summit should not be rolled out as "turn everything on and hope the team uses it." The right rollout starts with one workflow, one owner, and one success measure.

Rollout By Package

Notes rollout:

- Pick provider group.
- Pick appointment types.
- Define note review process.
- Train providers.
- Measure same-day completion and edit burden.

Front Desk rollout:

- Start with Morning Huddle.
- Add forms or scheduling workflow.
- Add recall or follow-up workflow.
- Train front desk.
- Measure task completion and interruption reduction.

Billing rollout:

- Start with Claim Review.
- Add Pre-Auth.
- Add Billing and Payment Plans.
- Train billing lead.
- Measure rework, AR visibility, and process adoption.

Complete rollout:

- Pick one anchor workflow.
- Train owner and team.
- Prove adoption.
- Add second workflow.
- Expand reporting and management cadence.

21. Red Flags And Green Flags

Green Flags

These usually mean the deal is worth real time:

- The prospect can name a specific workflow pain.
- The office manager or owner is involved.
- They already use Open Dental or understand Open Dental workflows.
- They know their recall, AR, claim, or note backlog problem.
- They are willing to pick one starting workflow.
- They care about human review.
- They ask about implementation, security, and training.
- They have an internal champion.

What to do:

Move toward a focused demo, package recommendation, and rollout discussion.

Red Flags

These usually mean slow down or disqualify:

- They want AI to make final clinical decisions.
- They want guaranteed claim payment.
- They refuse to discuss HIPAA, BAA, consent, or security.
- They only want the cheapest texting/reminder tool.
- They cannot name any real pain.
- They want every module turned on immediately with no owner.
- They say "our staff will not use anything" and have no plan to change that.
- The only contact is a low-level researcher with no access to decision makers.

What to do:

Narrow to one workflow. If they still cannot identify pain, nurture instead of pushing.

The Best Fit Test

Ask:

If Summit only helped with this one workflow, would it still be worth evaluating?

If yes, keep going.

If no, either the pain is not strong enough or you are selling the wrong workflow.

22. First Week Training Plan For A New Rep

This is a simple onboarding path.

Day 1: Learn The Product In Plain English

Rep must be able to explain:

- What Summit is.
- What it does not do.
- The four buyer-facing packages.
- The difference between demo tiers and packages.
- The human review message.

Pass/fail test:

Explain Summit in 30 seconds without using hype.

Day 2: Learn Dental Office Basics

Rep must learn:

- Main roles.
- Production vs collections.
- Recall.
- Treatment plans.
- Claims.
- Pre-auths.
- Narratives.
- Attachments.
- AR aging.
- Open Dental.

Pass/fail test:

Explain how a dental office loses money through recall, unscheduled treatment, claims, and patient balances.

Day 3: Learn Pain Routing

Rep must route:

- Notes pain to Notes Package.
- Front desk pain to Front Desk Package.
- Insurance/AR pain to Billing Package.
- Broad visibility pain to Complete Package.
- Staff workflow questions to AI Assistant add-on.

Pass/fail test:

Given 10 prospect statements, choose the package and the next discovery question.

Day 4: Practice Discovery

Rep must run a 10-minute discovery call.

Required questions:

- "Where is your team most overloaded?"
- "How do you handle that today?"
- "Who owns it?"
- "What happens when it falls behind?"
- "What would make this worth changing?"

Pass/fail test:

Rep can identify pain, package, stakeholder, and next step.

Day 5: Practice Focused Demo

Rep must demo one workflow without showing everything.

Pass/fail test:

Rep can explain why they are skipping irrelevant modules.

Day 6: Objection Practice

Rep must handle:

- "We already use Open Dental."
- "We already have reminders."
- "Is this HIPAA compliant?"
- "Can you guarantee fewer denials?"
- "Will staff use it?"

- "How much does it cost?"

Pass/fail test:

Rep answers without overpromising.

Day 7: Mock Full Sales Call

Rep runs:

- Opening.
- Discovery.
- Pain routing.
- Package recommendation.
- Focused demo.
- Objection handling.
- Next step close.

Pass/fail test:

Rep sounds like they understand the office, not like they memorized software features.

23. Rep Cheat Sheets

One-Minute Explanation

Summit is an AI operations layer for dental practices. It helps teams organize and act on the work around patient care: notes, front desk tasks, scheduling, recall, treatment follow-up, claim review, billing, and reporting. It does not replace clinical judgment or Open Dental. It helps the team see what needs attention and move faster with human review.

Thirty-Second Explanation

Summit helps dental offices reduce admin overload. It gives the team organized workflows for notes, front desk work, billing, recall, treatment follow-up, and daily huddles.

Ten-Second Explanation

Summit helps dental teams finish the admin work that falls through the cracks.

Best Discovery Question

Where is your team most overloaded right now?

Best Demo Question

Which workflow should I skip because it is not a real pain for you?

Best Close Question

If we solved this workflow first, would that be enough to justify a focused rollout?

Best Safety Statement

Summit assists the team. The practice still reviews, approves, and owns final decisions.

24. What Great Reps Sound Like

Great reps do not sound like software feature narrators. They sound like they understand the office.

Weak:

We have AI for notes, claims, forms, scheduling, billing, reports, and more.

Strong:

It sounds like the front desk is the pressure point. I am going to ignore the clinical note tools for now and show you how Summit helps the team start the day, handle forms, identify patient issues, and follow up.

Weak:

The AI can automate your billing.

Strong:

Billing is still a human-owned workflow. Summit helps surface the claim risks and missing pieces earlier so the team is not chasing the same preventable issues after submission.

Weak:

This is HIPAA compliant.

Strong:

Because this touches healthcare workflows, it needs the right security, BAA, access, audit, and consent review. We should include that in implementation.

Weak:

Let me show every module.

Strong:

I will show only the workflow that matches your pain. If it is useful, we can zoom out after that.

25. Manager Training Notes

If you are training a new rep, make them practice these before they sell.

Exercise 1: Explain Summit Without Saying "AI" First

Bad:

Summit is an AI platform.

Better:

Summit helps dental teams organize notes, front desk work, billing, recall, and follow-up so fewer tasks fall through the cracks.

Exercise 2: Route Pain To Package

Give the rep a phrase and make them choose the package.

"Doctors chart after hours."

- Notes Package.

"Claims come back for missing attachments."

- Billing Package.

"The front desk is buried in calls and forms."

- Front Desk Package.

"We have three offices and no consistent process."

- Complete Package.

"New staff constantly ask how to do things."

- AI Assistant add-on, often with Front Desk or Complete.

Exercise 3: Explain Human Review

The rep should say:

Summit drafts, flags, and organizes. The dental team reviews, approves, and decides.

If they cannot say this naturally, they are not ready.

Exercise 4: Run A Five-Minute Discovery

The rep must ask:

- "Where is your team most overloaded?"
- "How do you handle that today?"
- "Who owns it?"
- "What happens when it falls behind?"
- "What would make this worth changing?"

Exercise 5: Give A Focused Demo

The rep must demo only one package path and explain why they are skipping other modules.

26. Final Sales Philosophy

Summit wins when it is sold as workflow relief, not AI novelty.

The buyer wants:

- Notes finished.
- Claims cleaner.
- Patients followed up.
- Schedule filled.
- Recall worked.
- Treatment accepted.
- Balances collected.
- Staff supported.
- Managers informed.
- Owners less blind.

The rep's job is to find which of those matters most right now.

The best sales motion:

- Find the pain.
- Match the package.
- Demo the workflow.
- Confirm the owner.
- Scope the rollout.
- Avoid overpromising.

The best sentence in the whole playbook:

Summit helps dental teams see what needs attention, draft the repetitive work, and keep follow-up from falling through the cracks, while the practice stays in control of final decisions.
